

## **ADOL**

## **Drops**

### **Composition**

Each drop contains:

Vitamin A (as palmitate)	500	I.U.
Vitamin D3	200	I.U.

In an aqueous solution

### **Action**

Vitamin A is essential for normal vision, in dim light and for the integrity of epithelial cells. Deficiency may give rise to night-blindness and skin changes with a lowered resistance to minor skin infections, inflammation of the gums and pyorrhea.

Vitamin D is necessary for the absorption of calcium and phosphorus from the gastro-intestinal tract and for their transport. Deficiency of Vitamin D is associated with the occurrence of rickets in children and osteomalacia in adults.

### **Indications**

Vitamin A and D supplement in infants.

### **Dosage and Administration**

The recommended dosage in infants less than 1 year of age is 2 drops daily, diluted with water, milk, or fruit juice.

### **Presentation**

Bottle of 10 ml
